

A common concern about traditional shelving: **inventory control**. Most shelving solutions become deep, cavernous black holes where supplies or whatever you hope to keep track of *simply disappear!*

- elfa® ventilated shelving allows visibility on the highest shelves with a variety of shelf depths to work with.
- elfa® is so easy to rearrange, your inventory determines how the shelving is configured and how things are stored - *standard shelving and millwork do not have this kind of flexibility.*

The customer wanted a straight forward shelving solution for their specific forms management. elfa® suggested 2 ft. shelves in order to provide maximum flexibility, **in case the needs changed.**

One week later, **the customer** had re-arranged the shelves to this configuration to meet his needs with inventory.

JUNE 2003

The original set-up is still working **one year later**, with additional shelving installed to keep up with growth.
